

Aviation club provides an introduction to the science of flight, from how aircraft work, how they are built and what makes them fly. Students will learn about airplanes, rockets, jets, helicopters and drones. Each week there will be a new topic building up to flying drones and exploring their uses. This is a fun course designed to open the world of aviation up to the student.

Aviation club is taught by OHA Parent, Mr. Quincannon, for students in grades 5-8, and will be Mondays in Harkness room.
